ESPA's Authorized Training Partner in Orlando is Orange County Technical College. We have been working with them for a year to help them build and launch an all-new Electronic Systems Integration course this year in conjunction with their IT program. The curriculum will be centered around ESPA EST basics and CEDIA's Fundamentals book, along with a lot of hands-on activities. So students will be going into the workforce with a solid networking skillset along with a comprehensive intro to audio, video, control systems and more. We can't wait to see the line forming to hire these young people!

Last week, Orange Tech took several students to compete at Skills USA. And they came home with several great awards, including two in Residential Systems Installation and Maintenance:

Zachary Pahler won the Post-Secondary gold medal. And Rayton li won the silver medal for Secondary school students.

We are confident this is just a small taste of the great successes their new program will bring!

As always, my call to action for you integrators is to help us identify career centers and tech schools in your area to bring on as ESPA partners, allowing them to train and certify technicians for YOU to hire!
